6. Recommendations

Based on the investor's behavioral analysis, here are 4 actionable recommendations for retail investors:

1. Diversify your portfolio by investing in at least 5-7 different stocks or funds, rather than following the crowd and investing in the same popular stocks as everyone else.
2. Set a stop-loss order for each trade to limit your potential losses and avoid getting caught up in a "herding" mentality that can lead to impulsive decisions.
3. Take a step back and do your own research before making a trade, rather than relying on social media or online forums to make investment decisions.
4. Consider setting a "wait period" of at least 30 days before buying or selling a stock, to give yourself time to think critically and avoid making impulsive decisions based on short-term market fluctuations.
