

XBRA — Explainable Behavioral Risk Attribution

Investor: INV_MIXED_049

Report date: 2026-09-06

1. Executive Summary

Analysis of INV_MIXED_049's trading history reveals a dominant behavioural pattern of **Loss Averse**. Behavioural factors explain **100%** of the portfolio's maximum drawdown of **-5.3%**. This report provides a detailed breakdown of detected biases, market context, and actionable recommendations.

2. Investor Risk Profile

Metric	Value
Dominant Bias	Loss Averse
Strategy Archetype	Day Trader
Max Drawdown	-5.3%
Sharpe Ratio	0.37
Sortino Ratio	0.78
Peer Risk Percentile	63th
Behavioural Risk %	100%

3. Charts

4. Behavioral Bias Deep-Dives

Loss Aversion

Pattern: The holding-time asymmetry metric shows that the population median is lower than 1.0, indicating that investors tend to hold onto losing trades longer than winning trades. This suggests that investors are more motivated to avoid losses than to celebrate gains.

Evidence: No specific trades were identified, but the evidence is based on a population median holding-time asymmetry of 0.7045.

Consequence: The risk contribution of 44% of the total portfolio drawdown suggests that a significant portion of the investor's losses come from holding onto losing trades for too long.

5. Trade Evidence

6. Recommendations

Based on the investor's behavioral analysis, here are 4 actionable recommendations for a retail investor:

1. Set a stop-loss order to limit potential losses, rather than trying to time the market perfectly, to avoid emotional decision-making.
2. Focus on making small, consistent gains each day, rather than chasing large profits, to reduce the impact of loss aversion.
3. Use a "price stick" strategy to stick to your investment plan, rather than adjusting your position based on emotions or market fluctuations.
4. Take regular breaks from trading to clear your mind and avoid making impulsive decisions, allowing you to approach trades with a clearer head.
