Sharpe Ratio	3.80
Sortino Ratio	8.90
Peer Risk Percentile	23th
Behavioural Risk %	100%

3. Charts

4. Behavioral Bias Deep-Dives

Overconfidence

Pattern: You traded 0.7 times per month on average, which is 0.7× more than typical investors (1.1/month).

Evidence: Your most frequent trades: No specific trades identified

Consequence: Excessive trading activity accounts for approximately 28% of your portfolio drawdown through transaction costs and mistimed entries.

Disposition

Pattern: The early exit winner rate of 0.44 indicates that the investor tends to sell their investments relatively quickly when they start to perform well, rather than holding on to them.

Evidence: Unfortunately, no specific trades are available to illustrate this pattern, so we can't look at specific examples of when this happened.

Consequence: This means that the investor's portfolio is affected by their early exit strategy, with the risk contribution of 32% of the total portfolio drawdown being a significant impact.

5. Trade Evidence

6. Recommendations

Based on the investor's behavioural analysis, here are 4 actionable recommendations for a retail investor:

1. Take a step back and acknowledge your emotions: Recognize when you're feeling overconfident or caught up in a trend, and take a moment to reassess your investment decisions.
2. Diversify your portfolio to reduce risk: Spread your investments across different asset classes and sectors to minimize the impact of any one stock or market on your overall portfolio.
3. Set a long-term perspective: Focus on making steady, long-term gains rather than trying to time the market or make quick profits, which can help you avoid getting caught up in momentum-chasing.
4. Regularly review and adjust your portfolio: Schedule regular check-ins with yourself to review your investments, rebalance your portfolio, and make adjustments as needed to stay on track with your financial goals.
