Sharpe Ratio	3.46
Sortino Ratio	8.21
Peer Risk Percentile	13th
Behavioural Risk %	100%

3. Charts

4. Behavioral Bias Deep-Dives

Disposition

Pattern: The Early Exit Winner Rate of 0.5 indicates that the investor tends to exit their trades relatively quickly, as this rate is higher than the population median of 0.4318.

Evidence: Unfortunately, no specific trades are available to support this observation, as no trades are listed.

Consequence: The investor's reliance on early exits contributes to a significant 59% of the total portfolio drawdown, suggesting that their trading strategy may be more volatile than they intend.

6. Recommendations

Based on the investor's behavioral analysis, here are 4 actionable recommendations for retail investors:

1. Take a step back from the market and set a long-term investment plan, focusing on your financial goals rather than short-term gains.
2. Diversify your portfolio by spreading investments across different asset classes, sectors, and geographies to reduce reliance on any one stock or market.
3. Set a price limit for buying stocks and avoid impulsive purchases, allowing you to make more rational decisions based on fundamental analysis.
4. Regularly review and rebalance your portfolio to ensure it remains aligned with your investment goals and risk tolerance, making adjustments as needed to maintain a healthy mix of stocks and bonds.
