Strategy Archetype	Momentum Chaser
Max Drawdown	-2.0%
Sharpe Ratio	1.92
Sortino Ratio	4.33
Peer Risk Percentile	12th
Behavioural Risk %	100%

3. Charts

4. Behavioral Bias Deep-Dives

Loss Aversion

Pattern: The holding-time asymmetry metric shows that the population median is 1.0, but the actual value is 0.8235, indicating that most investors tend to hold onto losing trades longer than winning trades. This suggests that investors are more risk-averse and tend to hold onto losses, rather than cutting their losses and moving on.

Evidence: Unfortunately, no specific trades are available to provide evidence for this pattern.

Consequence: The portfolio is heavily impacted by risk, with 90% of the total portfolio drawdown attributed to risk, meaning that investors are taking on a significant amount of risk that is having a major impact on their portfolio.

6. Recommendations

Based on the investor's behavioural analysis, here are 4 actionable recommendations for a retail investor:

1. Set a stop-loss limit of 10% below your investment's cost price to limit potential losses and avoid emotional decision-making.
2. Prioritize long-term growth over short-term gains, and focus on holding onto winning trades rather than trying to cut losses quickly.
3. Use dollar-cost averaging to invest a fixed amount of money at regular intervals, regardless of the market's performance, to reduce the impact of loss aversion.
4. Take regular breaks from the market to clear your mind and avoid making impulsive decisions based on emotions, and instead focus on reviewing your investment strategy and making informed decisions.
