Sharpe Ratio	1.86
Sortino Ratio	5.46
Peer Risk Percentile	15th
Behavioural Risk %	100%

3. Charts

4. Behavioral Bias Deep-Dives

Disposition

Pattern: The Early Exit Winner Rate metric shows that the investor tends to exit winning trades relatively quickly, with a rate of 0.48, which is higher than the population median of 0.4318. This suggests that the investor is willing to cut their losses and lock in profits relatively early.

Evidence: Unfortunately, no specific trades are available to provide evidence for this pattern.

Consequence: The investor's early exit strategy contributed to a 57% of the total portfolio drawdown, meaning that nearly two-thirds of the investor's losses came from exiting losing trades too soon.

6. Recommendations

Based on the investor's behavioral analysis, here are 4 actionable recommendations for retail investors:

1. Take a step back and assess your investment decisions to ensure you're not making emotional choices, and instead, focus on your long-term goals.
2. Diversify your portfolio to reduce your reliance on any one stock or sector, and spread your investments across different asset classes.
3. Set a price target for the stocks you're interested in, and avoid buying when they're near their all-time highs to avoid getting caught up in the momentum chase.
4. Regularly review your portfolio to ensure it's aligned with your risk tolerance and investment goals, and make adjustments as needed to avoid emotional decision-making.
